Panasonic

CREATIVITY × CONNECTIVITY

High-quality 10-bit 4K V-Log Imaging and Professional-level Operability Enhanced with 12G-SDI Output and Four-channel Audio Input

Panasonic's CX Series of professional camcorders supports enhanced *creativity* by delivering highresolution video for diverse content creation and operability that maximizes the potential of professional shooting techniques. It also responds to the converging needs of broadcasting and IT by delivering enhanced *connectivity* through seamless integration with future-ready systems.

The AG-CX370, the newest addition to Panasonic's CX Series, is a high-end handheld camcorder ideal for contemporary video production. Building on the performance and operability of the existing AG-CX350, it features 10-bit 4K recording, a wide-angle, high-power zoom lens, HDR-compatible V-Log/HLG image quality and manual three-ring control for precise operation.

Expanded functionality includes a new four-channel audio input terminal, four-channel independent volume control, a GENLOCK input terminal for synchronized multi-camera recording, 12G-SDI for uncompressed 4K video output, and NDI[®] HX2-compatible IP output for enhanced operability.

The lightweight, compact, low-power AG-CX370 provides professionals with a powerful solution for production, broadcasting and streaming.

- **12G-SDI output:** SDI OUT supports 12G-SDI for uncompressed 4K video streaming.
- **GENLOCK input:** Enables multi-camera synchronization similar to professional broadcast cameras.
- **Four-channel audio input:** Equipped with a 3.5mm stereo mini-jack input as well as two XLR inputs.
- **Four-channel audio input volume:** Features an independent volume dial for each of four channels.
- **NDI® HX2 compatibility:** Supports high-quality IP live video production.
- Vertical video flag function: Ingest, playback, and edit as vertical video using video editing software. NDI®, a video connectivity technology, is registered as a trademark of Vizrt NDI AB in the United States and other countries.

Wide-Angle 24.5 mm Optical 20x Zoom

This lens has the angle of 24.5 mm*¹ on the wide end and allows recording of wideangle images with minimal distortion, without the use of a conversion lens. The optical 20x zoom covers up to 490 mm telephoto in all modes. Furthermore, the i.Zoom enables seamless zooming of up to 32x in HD or up to 24x in UHD from the telephoto end with no degradation in

resolution. The AG-CX370 also comes with digital 2x/ 5x/10x zoom.*² *1:In 35 mm equivalent, wide angle of 24.5 mm is achieved in UHD/FHD (16:9).

*2: When using the digital zoom, picture quality degrades as the magnification rate increases.

Manual Three Rings and Focus Assist

The AG-CX370 comes with Manual Three Rings for zoom, focus and iris control. They deliver quick response and provide tactile feel that satisfies professionals. The zoom lever located at the upper section of the handle has a multi-step variable zoom function, allowing smooth zooming from ultra-low speed when shooting from low angle shooting and when a tripod is used.

The AG-CX370 is also equipped with Expand and Peaking (simultaneous display possible), Manual Focus Assist, LCD Touch Focus (switchable to Auto Iris or brightness display), Area Focus and One-Push AF Focus Assist.

Intelligent AF and Face Detection/Tracking AE & AF

The AG-CX370's auto focus system is Intelligent AF, which is equipped with a micro drive focus unit to achieve high focusing speed, excellent tracking performance and superb stability. Equipped with Face Detection AE & AF, it detects human faces (up to 9 faces/automatically determines the main face) and automatically adjusts exposure and focus. In addition, it has an auto-tracking AE & AF function that follows the subject (color) touched on the LCD monitor.*

*The face detection AE & AF does not function during infrared recording, VFR/super slow recording or when using Expand/Focus Assist or AREA/AF AREA.

5-Axis Hybrid Image Stabilizer

The AG-CX370 has a built-in hybrid image stabilizer that combines optical and electronic camera shake compensation functions. It corrects camera shake in five axial directions in all modes* including UHD to provide powerful camera shake compensation power in low-angle shooting, highangle shooting and all other unstable conditions. There are three modes to choose from: NORMAL (standard), STABLE (effective for fixed-frame shooting) and PAN/TILT (effective in panning and tilting).

* Excluding Super Slow and VFR modes.

High-Quality 4K/HDR Images with a 1.0-type Sensor and V-Log/HLG Gamma

High-Definition, High-Sensitivity 1.0-type 15M MOS Sensor

The 1.0-type MOS (approximately 15,030,000 pixels) offers an outstanding depth of field and excellent balance between image quality and sensitivity. It supports multi-formats, such as UHD (3840 x 2160), FHD and HD provides images without cropping in all modes. This MOS sensor also boasts high sensitivity of F12 (60 Hz) /F13 (50 Hz) (in both UHD and FHD in High Sensitivity mode).

Broadcast-Grade Picture Quality Adjustment Functions

- 16-Axis Independent Color Correction: Provides an independent effect to each of the 16 phases of video images. It enables color matching of multiple cameras under the same lighting conditions as well as creative image rendering.
- Master Detail: Adjusts the overall degree of contour enhancement.
- Skin Detail: Makes skin colors appear soft and beautiful.
- Scene Files: Six preset files are provided. You can change any of the settings as desired.
- Other Picture Settings: Matrix tables, V detail, detail coring, chroma level, chroma phase, color temperature, master pedestal and knee.

16-Axis Independent Color Correction Illustration

HDR-Compliant V-Log/HLG (Hybrid Log-Gamma)

The AG-CX370 features HLG (Hybrid Log-Gamma)*¹ to support HDR (High Dynamic Range,) in addition to V-Log gamma, which is equipped with 13.5 stops of wide dynamic range. The gamma mode can be selected from nine modes (HD, SD, FILMLIKE 1, FILMLIKE 2, FILMLIKE

3, FILM-REC, VIDEO-REC, HLG, V-Log).

*1: The HLG specification was developed jointly by Japanese broadcaster NHK and the BBC in the UK. It is defined in ARIB STD-B67 and ITU Rec. 2100.

Simultaneous Display on High-Brightness, High-Definition LCD and High-Resolution OLED EVF

The AG-CX370 features a 3.2-type high-definition LCD monitor (approximately 1,620,000 dots). This LCD monitor uses the RGBW (red, green, blue, white) pixel structure to provide high visibility even in bright sunlight. The 3:2 aspect ratio enables the display of timecode and camera status without superimposing on the image. The touch panel function allows convenient touch focus and menu setting. The viewfinder is a highresolution color OLED (approximately 2,360,000 dots, with an image display area of approximately 1,770,000 dots) that offers superb color reproduction. The AG-CX370 supports simultaneous LCD and EVF outputs, the LCD monitor can display the captured image at all times even when you look away from the EVF.

LCD Monitor Screen While Shooting (Pictures simulated)

High-quality 10-bit 4K/60p Recording using HEVC Codec

The AG-CX370 supports numerous recording formats and compression rates (see page 6). High-quality 10-bit 4K (UHD) 60p (or 50p) video can be recorded onto a memory card, and the efficient HEVC codec enables smooth playback on notebook PCs. Highly compatible MOV files support filenames up to 20 characters, for easy clip management. * Playback may lack smoothness depending on the PC environment, such as storage and memory

 Playback may lack smoothness depending on the PC environment, such as storage and memory devices.

10-bit Variable Frame Rate (VFR) without Cropping

In UHD, variable frame rate (VFR) recording at 1 fps to 60 fps is possible. In FHD, super-slow can be realized at a maximum of 120 fps. Both provide high-quality 10-bit, full-frame pictures with no image area cropping even at high frame rates.

* VFR and super slow are supported only in MOV recording mode.

P2 MXF File Formats Supported with Proxy and Shot Mark

The AG-CX370 supports broadcast-ready P2HD (MXF) file formats. Simultaneous recording of main and proxy files allows dual gamma capture (V-Log/V-709 and HDR/SDR). Shot Mark is also supported for thumbnail display and playback of only marked clips. Operation is equivalent to that of professional P2HD camcorder systems, and conventional AVCHD recording is also supported.

*Proxy recording cannot be used during MOV/AVCHD/AVC-LongG12 codec recording, streaming, NDI®|HX2, VFR, interval recording, simulcast recording, background recording and timestamp recording. *Shot Mark cannot be used during MOV/AVCHD codec recording, interval recording and when

*Shot Mark cannot be used during MOV/AVCHD codec recording, interval recording and when playback is paused. In simultaneous recording mode, the Shot Mark as last clip is not supported.

Versatile 4-Channel Audio Input with Independent Volume Controls

Alongside two XLR inputs, a 3.5mm stereo mini-jack input supports up to four external microphones for 4-channel audio recording.*1 In MOV or P2 MXF mode, 24-bit linear PCM recording achieves exceptional sound quality. Each channel is equipped with a dedicated volume control for precise manual adjustment. Other audio features include a 4-channel manual volume control, an OSD level meter, 1 kHz test tone output*2 and a headphone output (3.5 mm-diameter stereo mini-jack).

- *1: When MOV or P2 MXF is selected as the main recording format. In AVC-LongG12 mode, only 16-bit LPCM 4-channel recording is supported. And in AVCHD mode, only 2-channel recording is possible.
- *2: This output is produced when the color bar is displayed. When the 50 Hz system frequency is selected, the output is 997 Hz.

Double Memory Card Slots Improve Recording Reliability

Two SD memory card*¹ slots enables unlimited*² relay recording by changing memory cards. Recording reliability is further improved with simultaneous recording and background recording*³.

And the AG-CX370 is equipped with Pre Rec, Interval Rec, Time Stamp and Still Image Capture recording functions.

Unlimited Relay Recording*2

Automatically records continuously from Slot 1 to Slot 2. By changing a full card with a new card, images can be recorded continuously for many hours.

Simultaneous Recording

Background Recording*3

Identical data is recorded onto cards in both slots in this dual recording mode.

Records ordinary Rec Start/Stopcontrolled data in Slot 1, and records all data, even when Slot 1 is stopped, in Slot 2.

*1: For memory card usage conditions, please refer to the Recording Media table on page 6.
 *2: If the relay recording time reaches 10 hours, shooting will temporarily stop, and then

- automatically restart a few seconds later. If it is recorded in MOV format, the file will be split every 3 hours and recorded.
- *3: Supported only in MOV recording mode.

REC Metadata with Vertical Video Flag Support

Clip metadata (cameraperson, location, date, time, text memory, etc.) is added to the clips. In addition to the camera itself, data settings can be transferred from an SD card, the CX ROP app or the cloud. A list of clip metadata can be displayed on the camcorder's LCD monitor.

A new vertical video flag function has been added. Recorded video files can now be ingested, played back, and edited as vertical video using video editing software.*

editing software.* *Note: Vertical video flagging is only enabled for MOV recording and is not supported for streaming

Vertical Shooting with AG-CX370

Equipped with 12G-SDI Output and GENLOCK Input

The SDI output terminal now supports 12G for high-quality, uncompressed 4K video streaming to the latest video equipment. Additionally, the newly integrated GENLOCK input terminal enables broadcast-grade synchronization in multi-camera systems.

Optimized IP Live Production with NDI® HX2

Built-in NDI® HX2 compatibility is provided for IP-based transmissions and camera control when connected to NDI®-compatible devices such as switchers and decoders. NDI® HX2 efficiency ensures seamless live production for event broadcasting, online streaming and more. * Recording, streaming and 4K output are not available when using NDI® HX2 mode.

* Recording, streaming and 4K output are not available when using NDI® HX2 mode.

 NDI[®] is a video connectivity technology and is registered as a trademark by Vizrt NDI AB in the United States and other countries.

Streaming Capabilities with 4K Quality and SRT Protocol Support

4K (24p/25p/30p/50p/60p) high-definition streaming is supported. HD streaming output is possible while recording. It is compatible with many services such as Facebook and YouTube and allows you to directly broadcast without an external encoder unit.

The streaming method supports RTMP/RTMPS/RTSP/SRT protocols. SRT protocol enables high-quality streaming. Both of Client/Listener mode and encryption are supported. H.264/H.265 codec and 8/12/25/50/75 Mbps bitrate can be selected. Also supports USB tethering using a 5G smartphone.

*Not compatible with NDI® HX2 connection. During 4K streaming, recording, thumbnail display, and playback cannot be performed at the same time. When using RTMPS, only H.264 codec is available. When using RTMPS or SRT encryption, the bit rate will be less than 25Mbps. The P2 Network Setting Software is convenient for setting up the RTMP, RTMPS and SRT Client functions. SRT streaming does not support 24p video and SD video.

See the website, <https://pro-av.panasonic.net/en/support/connection_ confirmed/server/usb_tethering.html> for the smartphone that have been confirmed to be compatible.

See the website, <https://pro-av.panasonic.net/en/support/connection_ confirmed/live_video/> for the live video streaming services that have been confirmed to be compatible.

Connectivity-verified live video services

Wired/Wireless Remote-control Capability

- Wired Remote Control: The remote terminal (2.5 mm super mini jack) enables the control of the focus and zoom using a remote controller (third-party product).
- IP Remote Control: When connected via a wired LAN, the AG-CX370 can be operated remotely using devices such as the AW-RP150GJ remote camera controller or the AK-HRP1010GJ, AK-HRP1015GJ remote operation panels.
- Wireless Remote Control: Remote operation is also possible via the free CX ROP tablet/smartphone app (available from the App Store and Google Play).* The app enables wireless zoom, i.Zoom, focus, camera settings and adjustments, REC start/stop, menu settings, metadata transfer, port number assignment, and more. In multi-camera mode, the app can connect to up to eight CX Series camcorders (AG-CX370, AG-CX350 and AJ-CX4000GJ) for seamless switching between units.**

* iPhone/iPad: iOS 12 and later are supported. Android devices: Android 5.0 and later are supported. A wireless module (optional AJ-WM50, AJ-WM50G or recommended third-party Wi-Fi dongle) is required.

** Simultaneous/synchronous control of multiple cameras is not supported. Switching cameras takes several seconds.

 The Apple App Store and iPad are service marks or trademarks of Apple Inc. registered in the United States and other countries.

Professional System Features

- Parallel Output of SDI and HDMI: Both SDI and HDMI support 4K 10-bit high-quality video output. In V-Log shooting, either V-Log or V709 (HDR or SDR in HLG shooting) can be selected for each of the SDI, HDMI and LCD video outputs.
- TC Synchro Multi-Camera Recording: The TC IN/OUT terminal (BNC) allows synchronization of the time code in multi-camera shooting. The camera number (A to Z) can be added* to the name of the recording folder to facilitate editing.
- Genlock Input Terminal: It enables broadcast-grade synchronization in multi-camera systems.
- Automatic Tally: TSL protocol compatibility allows automatic tally lamp activation when connected to a switcher.
- Compatible with LiveU/TVU Bonding Connection: displays the device information (battery status/remaining battery capacity/errors) onto the viewfinder/LCD monitor.

Low Power Consuming, Large-Capacity Battery, Quick Charge

The AG-CX370 boasts low power consumption of 17 W (in factory setting, with no devices connected to the terminals). The maximum power consumption is only 26 W (HEVC recording, LCD turned ON, devices connected to the terminals). With the supplied battery pack (5,900 mAh), the AG-CX370 operates continuously for about 2 hours and 10 minutes. This large-capacity battery pack supports quick charges.*
